Used in determining EPC pressure, Shift and Torque Converter Clutch scheduling.
Used by PCM in determining EPC pressure, Shift and Torque Converter Clutch scheduling.
Used in determining EPC pressure.
A momentary contact switch that signals the PCM to allow automatic shifts from 1st through 4th or 1st through 3rd gears.
HOT IN START OR RUN
HOT AT ALL TIMES

The BPP switch sends a signal to the PCM to disengage the torque converter clutch when the brake pedal is depressed. This signal may be ignored by the PCM if TP signal is above closed signal.
