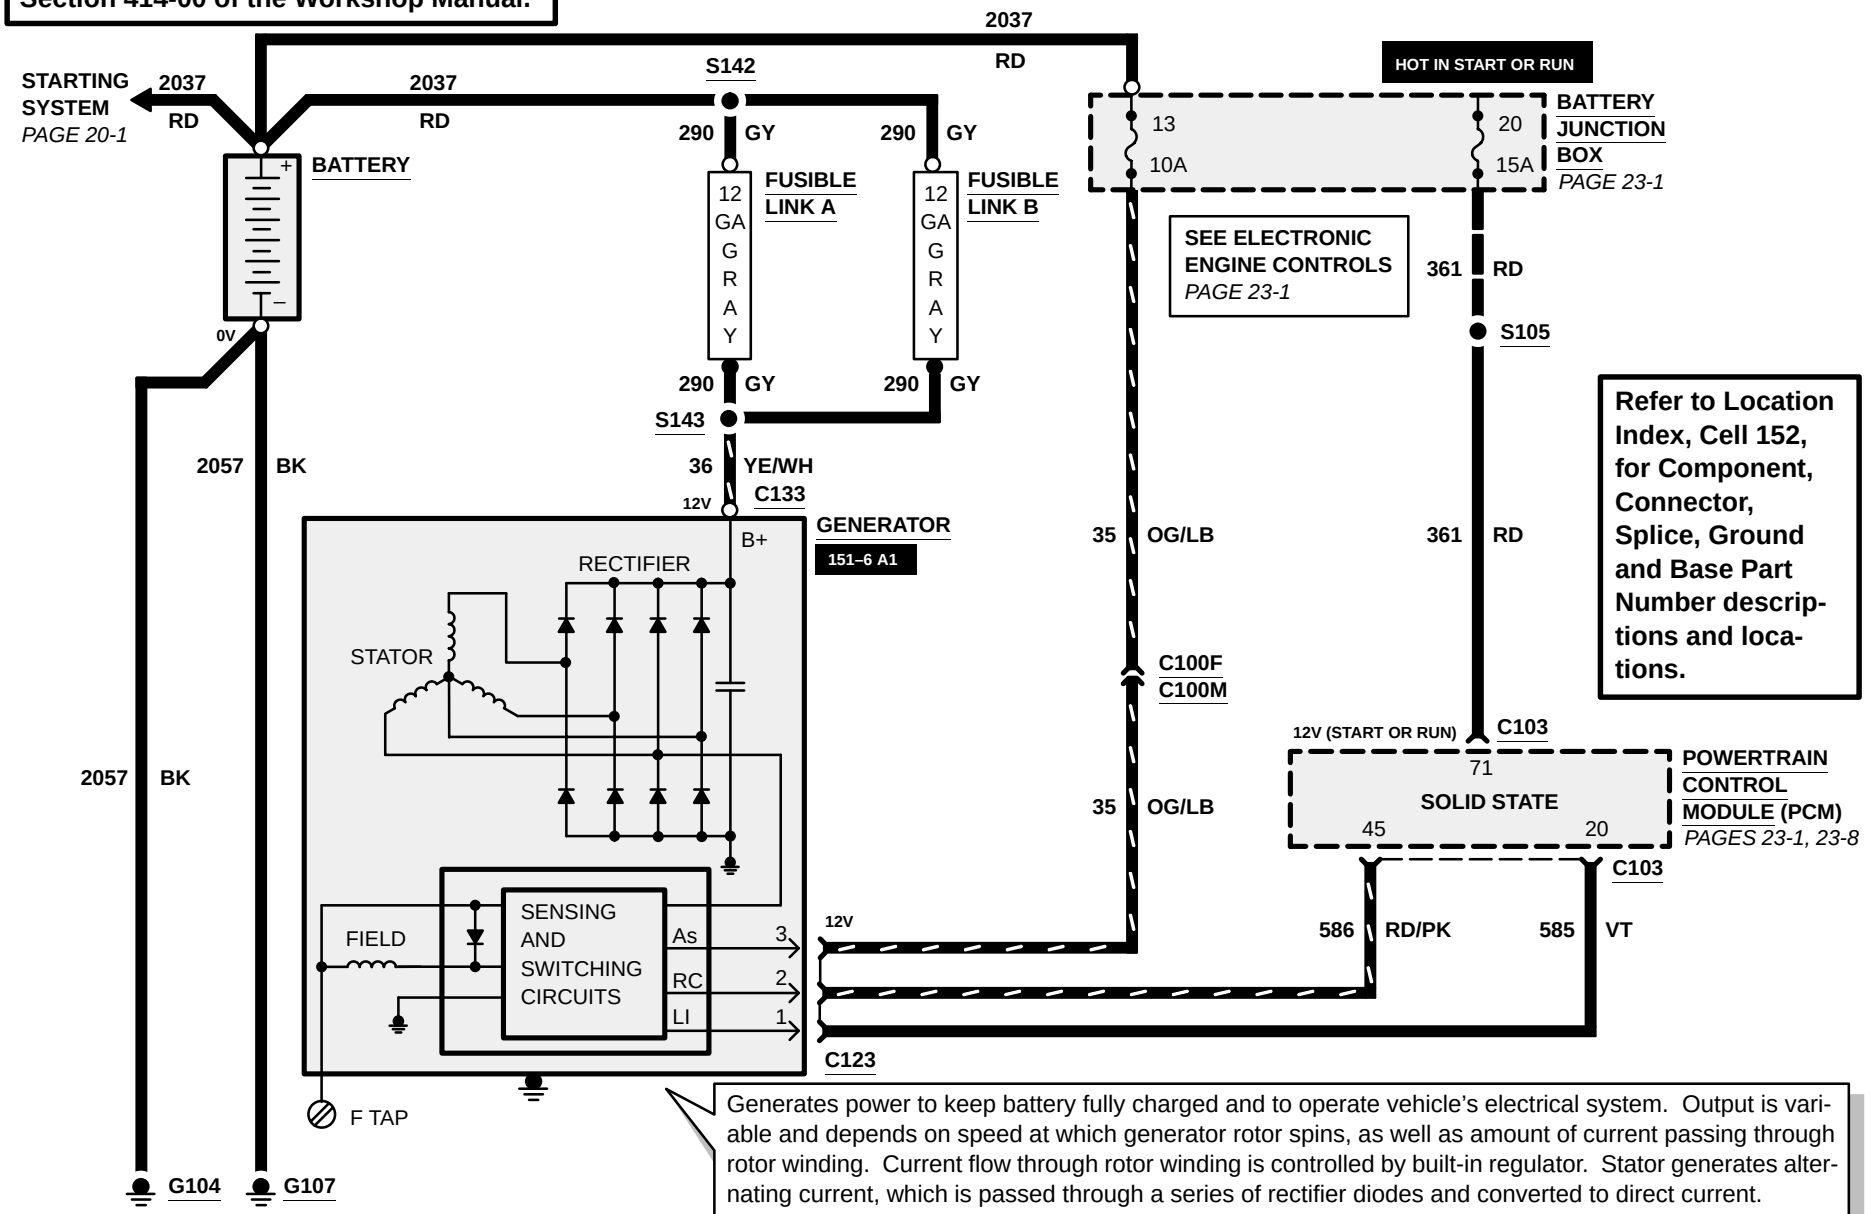
12-1 CHARGING SYSTEM

2001 WINDSTAR

For diagnostic information, refer to Section 414-00 of the Workshop Manual.



Generates power to keep battery fully charged and to operate vehicle's electrical system. Output is variable and depends on speed at which generator rotor spins, as well as amount of current passing through rotor winding. Current flow through rotor winding is controlled by built-in regulator. Stator generates alternating current, which is passed through a series of rectifier diodes and converted to direct current.
